- “ Sternum strap
- “ Reinforced back panel
- “ Double layered bottom
- “ Breathable meshed paddings

Combatsack is a 100-liter dry backpack with ergonomic design that makes a long journey enjoyable even if it means a heavy rain or water-crossing. Dual sealing system and airtight roll-down closure allow the backpack float on water surface. Main compartment keeps clothes and sleeping gear dry. Internal pockets and 3 large organiser bags help to classify personal items. A4 sleeve is included. MOLLE webbings (available also on the shoulder straps) make it easy to attach pouches and tools. Breathable mesh covered paddings increase moisture wicking properties and support skin health. Adjustable straps sit with tactical vests. Vertical weight distribution keeps correct center of gravity. Combatsack helps to prevent IR detection and keeps heated items hidden from thermal imaging.

Disclaimer – All information of water-crossing is provided “as is” without any warranties. For further warnings read the user manual.
